

NPDES STORMWATER COMPLIANCE SMALL PROJECTS WORKSHEET

Small Projects are projects that are subject to approval and/or permits that create and/or replace 2,500 sq. ft. but less than 10,000 sq. ft. of impervious surface, and single family detached homes that create and/or replace 2,500 sq. ft. or more of impervious surface (as of December 1, 2012, per MRP Provision C3ii).

An impervious surface is surface covering or pavement that prevents the land's natural ability to absorb and infiltrate rainfall/stormwater. Impervious surfaces include, but are not limited to rooftops, walkways, paved patios, driveways, parking lots, storage areas, impervious concrete and asphalt, and any other continuous watertight pavement or coating. Pervious pavement, underlain with pervious soil or pervious storage material (e.g., drain rock), the infiltrates rainfall at a rate equal to or greater than surrounding unpaved areas OR that stores and infiltrates the water quality design volume specified in Provision C.3.d of the Municipal Regional Stormwater Permit (MRP), is not considered an impervious surface.

Small Projects must implement at least one of the six specified Low Impact Development (LID) Site Design Measures. Check one or more that will be applied to your project.

- Direct roof runoff into cisterns or rain barrels for reuse.
- Direct roof runoff into vegetated areas.
- Direct runoff from sidewalks, walkways, and/or patios onto vegetated areas.
- Direct runoff from driveways and/or uncovered parking lots into vegetated areas.
- Construct sidewalks, walkways and/or patios with permeable surfaces.
- Construct driveways and/or uncovered parking lots with permeable surfaces.
